

## VisiCut

### An Application Genre for Lasercutting in Personal Fabrication

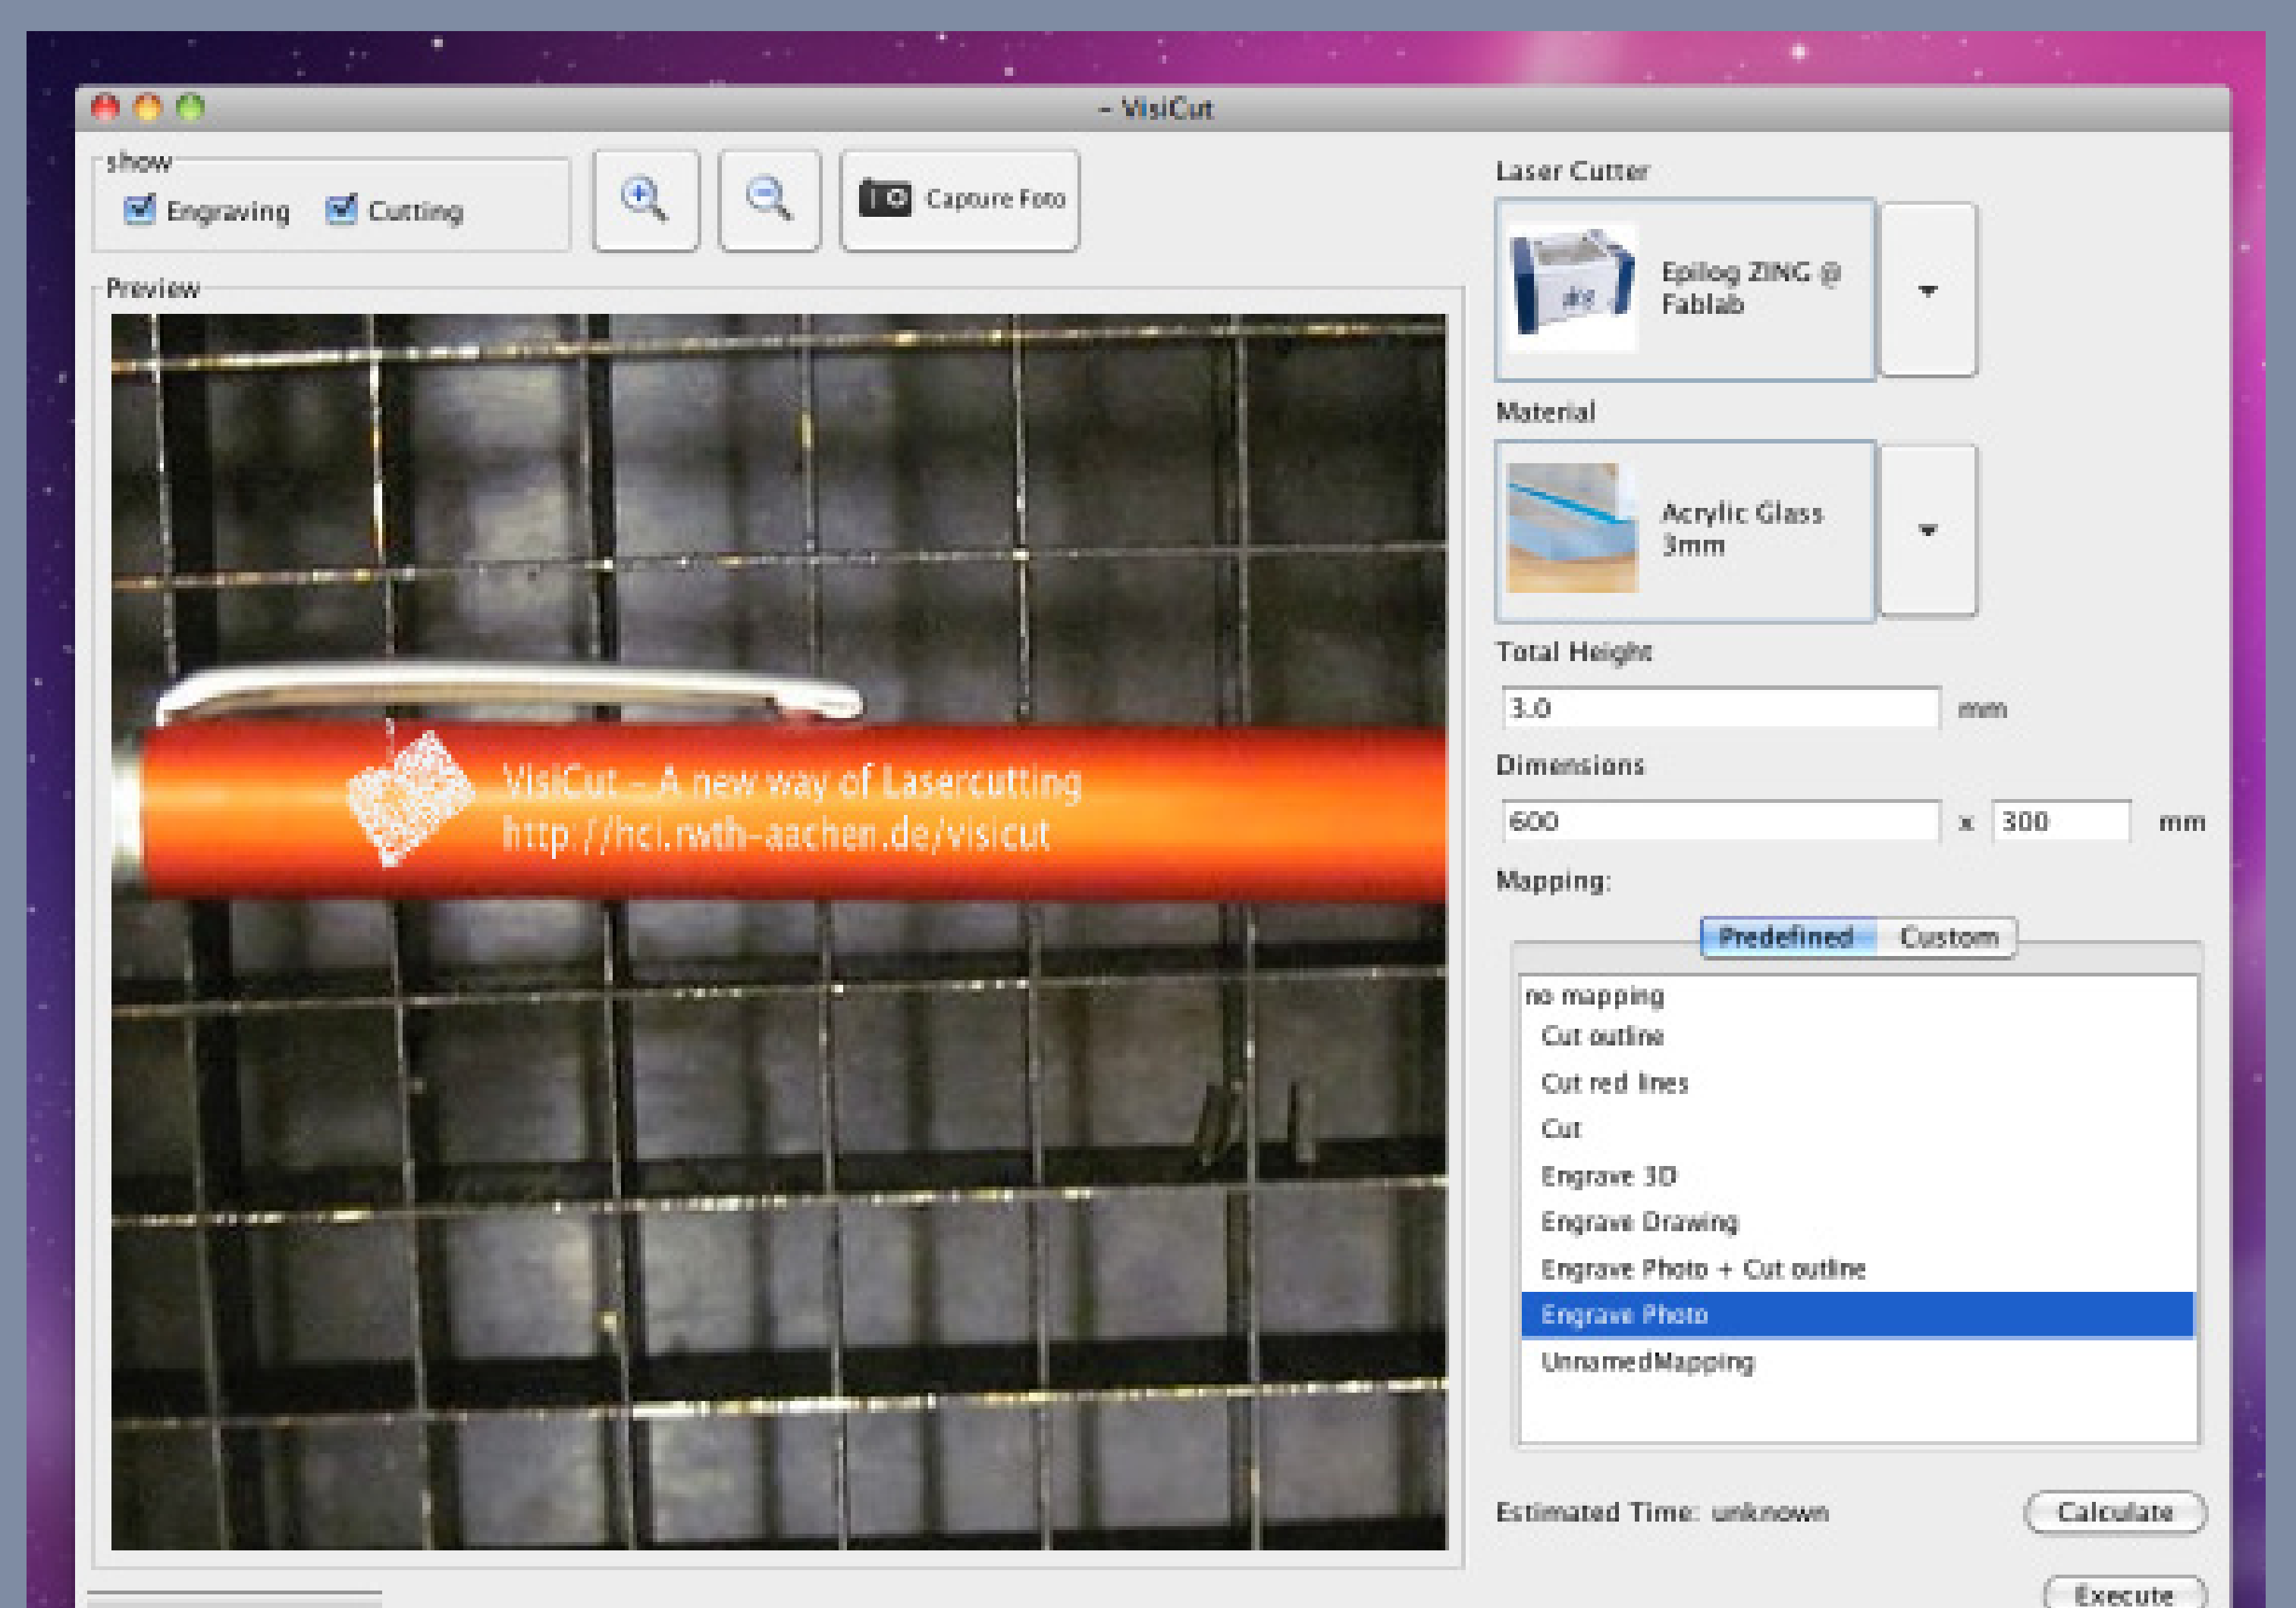

Thomas Oster

VisiCut is a tool to prepare graphics created with drawing software for laser cutting. It includes platform independent drivers for several lasercutters.

#### Features

- Position your graphics directly on a camera preview of the target material
- Open files in the SVG, EPS, DXF or VisiCut PLF (Portable Laser Format)
- Get a preview how your graphics would look on the material
- Save your work and publish it in the VisiCut PLF-Format
- Prepare your laserjobs at home - no more surprises when importing your file in the FabLab

#### VISICUT - WORKFLOW
